FAST-NU, Lahore, Pakistan

Exercise (35 Marks)

- For this exercise, use the notebook *AI_Lab_2_Exercise.ipynb* provided on Google classroom.
- Open the *AI_Lab_2_Exercise.ipynb* on Google Collab by uploading it.
- The *main()* function is already defined and complete. DO NOT change it.
- Only enter your code within the space provided in the notebook.

1 Palindrome Detection (5 Marks)

Given a string *s*, create a function to detect if it's a palindrome. A palindrome is a word, phrase, number, or other sequence of characters that reads the same backward or forward.

2 List Flattening (5 Marks)

Given a nested list of integers, create a function to flatten the list to a single-level list. For example, `[[1, 2, 3], [4, 5]]` will be flattened to `[1, 2, 3, 4, 5]`.

3 List Intersection (5 Marks)

Given two lists of integers, create a function to return a list that contains only the elements that are common between the two lists (without duplicates). Make sure your program works with lists of different sizes.

4 String Anagrams (5 Marks)

Given two strings, create a function to detect if they are anagrams. An anagram is a word, phrase, or name formed by rearranging the letters of another, such as *cinema*, formed from *iceman*.

5 Binary Search (5 Marks)

Given a sorted list of integers, create a function to perform binary search on the list and return the index of the target element. If the target element is not found, return -1.

6 Merge Sort (5 Marks)

Given a list of integers, create a function to sort the list using the merge sort algorithm. The merge sort algorithm is a recursive sorting algorithm that works by breaking down the list into smaller sub-lists and then recombining them in a sorted manner.

7 Quick Sort (5 Marks)

Given a list of integers, create a function to sort the list using the quick sort algorithm. The quick sort algorithm is a recursive sorting algorithm that selects a pivot element from

the list and then partitions the other elements into two sub-lists, according to whether they are less than or greater than the pivot.

8 Frequency Counter (5 Marks)

Given a list of integers, create a function to return a dictionary that contains the frequency count of each element in the list. For example, the list [1, 2, 2, 3, 4, 2] would return {1:1, 2:3, 3:1, 4:1}.

9 Count Distinct Elements (5 Marks)

Given a list of integers, create a function to return the count of distinct elements in the list. For example, the list [1, 2, 2, 3, 4, 2] would return 4.

10 Union and Intersection of Sets (5 Marks)

Given two sets of integers, create a function to return the union and intersection of the sets as a tuple of two sets. The union is the set of elements that appear in either set, while the intersection is the set of elements that appear in both sets.

11 Unique values in a dictionary (5 Marks)

Given a dictionary, return a list of all the values in the dictionary, but without any duplicates.

12 Most common values in a dictionary (5 Marks)

Given a dictionary, return the key(s) of the value(s) that appear most often. If there is a tie, return all keys.

13 Combine dictionaries (5 Marks)

Given two dictionaries d1 and d2, return a new dictionary which contains all the keys and values from d1 and d2. If a key is in both dictionaries, the value from d1 takes precedence.

14 Filter list of dictionaries (5 Marks)

Given a list of dictionaries and a key, return a new list that contains only the dictionaries that have the given key.

15 Find duplicates in a list (5 Marks)

Given a list, return the elements that are duplicated in the list. The returned list should only contain the duplicated elements, without any duplicates.

Submission Instructions

Always read the submission instructions carefully.

- Rename your Jupyter notebook to your roll number and download the notebook as **.ipynb** extension.
 - To download the required file, go to **File->Download .ipynb**
 - Only submit the **.ipynb** file. DO NOT **zip** or **rar** your submission file
 - Submit this file on Google Classroom under the relevant assignment.
 - Late submissions will not be accepted
-
